

Technical Logistics

Complete delivery in a nutshell

Whether you've ordered a large-screen TV, photocopier or exercise machine: Swiss Post Technical Logistics will deliver your equipment carefully, punctually and to the location of your choice. Our specially trained staff will install it and explain to your customers how to use it.

Are you looking to outsource processes which are time-consuming and costly, or perhaps not among your core competencies? Do your customers want their goods delivered directly to their company or to their home? Should the equipment ideally be unpackaged on-site, installed and commissioned, and any packaging material disposed of?

All in one: delivery, installation and instruction

Simply send us your delivery order. Our order processing team will agree a delivery date with the recipient. We will collect the goods from you or you can drop them off with us in Schlieren. Our trained staff will transport the goods from there – or from Daillens for destinations in western Switzerland – to the intended recipient. Depending on the order, the equipment will be installed, tested and explained. Whether it's a fridge that needs unpacking or the full installation of a home trainer complete with pulse monitor and explanation on how to use it: our employees will perform these tasks for you in a reliable and professional manner.

Thanks to our specialist fleet of vehicles and our large array of transport aids, we can also pick up unpackaged equipment of all shapes and sizes and deliver them to a location specified by you: the fast server to the fire control room, the colour printer to the reception office or the fridge to the kitchen. On request, we will also dispose of the packaging material or your old equipment. We are an experienced outsourcing partner for many different sectors including office automation, consumer electronics, IT, pharmaceuticals and sport.

Our equipment

- Chair lifts
- Edge protectors
- Padding
- Toolboxes
- Wheeled lifting containers
- Tension belts
- etc.
