1 Introduction

1.1 For whom is this manual intended?

These instructions are intended for business customers who send parcels and express items with Swiss Post.

Following these instructions will help ensure that barcodes and addresses are automatically read, enabling delays to be avoided.

1.2 What do these instructions contain?

These instructions describe the basis for
– optimal packaging,
– optimal addressing,
– optimal dispatch preparation of your shipments.

1.3 Validity

These instructions are valid from November 2019. They replace the version dated February 2019.

Swiss Post may make changes to reflect additions or adjustments to the services it offers.

We have marked all new sections to content with a line at the margin.

1.4 Guided tours

Would you and your association, company or friends like to discover what happens in a parcel center or post letter center? You’re welcome to join us on an exciting tour.

Registration: www.swisspost.ch/about-us/profile/guided-tours

2 Packaging
Recommendations and requirements

2.1 Types of consignment

We differentiate between three different types of consignment:
- standard consignments
- consignments with manual processing (MAN)
- bulky consignments (bulky goods, BG)

You can find an overview with images on page 17 under “Overview of three types of consignments”.

2.1.1 Standard consignments

Standard consignments are rectangular. The surface must not be wavy and not sloping (at most 5° for the display surface).

Minimum dimensions (recommended)
- Thickness 1 cm
- Weight 100 g
- Format 10.5 x 14.8 cm (A6)

Maximum dimensions
- Weight 30 kg
- Format 60 x 60 x 100 cm

Tip

Consignments below the minimum dimensions may also be processed. Recommendation: Please take the minimum dimensions into consideration. This allows consignments can be processed at our facilities automatically, carefully and without the use of additional equipment.

Shipments with overweight/oversize

Post CH Ltd shall levy a surcharge for parcels with weights or dimensions differing from those of standard parcels and bulky goods. This shall apply to parcels with a weight of more than

Examples

Rectangular standard consignment with light packaging colour and without motif prints on the surface.

Dispobox: Swiss Post’s reusable container from impact-resistant plastic is available in different sizes. Ordering and conditions can be found at www.swisspost.ch/dispobox.

PostPac, the practical cardboard packaging from Swiss Post, is available in different sizes. Find out more at www.swisspost.ch/postpac.

Clothing and similarly light or non-impact-sensitive items up to 2 kg may be sent in bags. The contents should be flat. If you intend to use shipping bags, our competence center (CC) will be happy to advise you on packaging and addressing quality. You can find the addresses on page 4.
30 kg and/or with a length of more than 250 cm and/or with a length and girth combined (2 × height + 2 × width + 1 × longest side) of more than 400 cm. The surcharges currently in effect are published on the Post CH Ltd website. Post CH Ltd reserves the right to limit the range of services offered for such consignments.

### 2.1.2 Consignments with manual processing (MAN)

Despite having standard dimensions, certain consignments are unable to be sorted by machine. They require manual processing if they have the following characteristics:
- special packaging*
- certain packaging materials*
- certain placement of the address and consignment barcode
- parcels with wavy or sloping surface (above 5° for the display surface)

* These types of consignment can impede the sorting process or damage other consignments.

Consignments with manual processing incur supplementary charges. Examples:

**Form**

- Rolls including cans up to 100 cm in 1 dimension
- Bottles (excluding glass)
- Pyramids up to 100 cm in 1 dimension
- Canisters
- Triangular packages up to 100 cm in 1 dimension and parcels, whose address labels with barcodes can no longer be read automatically by the system because of wavy surfaces or a surface slant of more than 5° on the display surface.

**Materials**

- Wood
- Metal
- Leather

**Address placement**

- Do not put consignment barcodes and recipient details on the same surface. As long as the address data is transferred with DataTransfer, no additional charge will be made for manual processing.
2.1.3 Bulky consignments (SP)

Consignments which exceed the maximum dimensions for standard items, are unpacked or sent with a special tag are deemed to be bulky goods. Consignments over 30 kg or consignments which exceed the bulky goods dimensions must be sent via the small consignments channel (contact: Swiss Post Customer Service).

Bulky goods include
Consignments over 100 cm in length or with 2 dimensions greater than 60 cm.

Maximum dimensions for bulky goods

<table>
<thead>
<tr>
<th>Dimension</th>
<th>Limit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Length</td>
<td>max. 250 cm</td>
</tr>
<tr>
<td>Girth max.</td>
<td>400 cm (2 x height + 2 x width + longest side)</td>
</tr>
<tr>
<td>Weight</td>
<td>30 kg</td>
</tr>
</tbody>
</table>

Bulky goods can generally be transported without packaging. But they require packaging when:
- the goods must be protected (liability can be declined for scratches and dents on unpackaged objects)
- there is a risk of injury.
2.1.4 External packaging

For external packaging, reusable or disposable packaging, e.g. corrugated cardboard, is appropriate.

Concerning cardboard strength, we recommend:
- up to 2 kg: E-Wave (single wave; 1.5 mm)
- up to 5 kg: B-Wave (single wave; 3 mm)
- up to 10 kg: C-Wave (single wave; 4 mm)
- up to 20 kg: EB (double wave; 4.5 mm)
- up to 30 kg: CB (double wave; 7 mm)

If the original packaging corresponds to the sales packaging in the store, then this must also be packed in an additional shipping carton for protection. Swiss Post is liable only if it accepts that the packaging was sufficient to protect the contents adequately and effectively against theft or damage.

Hints
- Transparent film is not a substitute for the protection of a secure outer packaging.
- The use of grey board is not recommended because of inadequate protection.
- When used packaging is being used again, remove all old address labels, consignment barcodes, and barcodes for basic/value-added services and delivery instructions.

Tip
The PostPac packaging from Swiss Post is highly suitable for shipping. If something more robust is required, we recommend business customers use our Dispoboxes, the sturdy reusable containers. Additional packaging options are available from various packaging suppliers.

2.1.5 Adhesive tape and strapping

Adhesive tape allows lighter parcels and express items to be sealed quickly and easily. Simply seal the open sides and strengthen the weak spots.

Bright, transparent and blank adhesive tape is permitted. They allow the correct address to be read more easily and help to prevent delays.

Adhesive tape and strapping must not be attached over barcodes or addresses. The same applies for transparent film or adhesive tape, because their reflective properties prevent the address from being read correctly. This excludes document pouches.

2.1.6 Packaging colour

Bright packaging colours (in brown or nature) are ideal, without motif prints on the parcel surface. The contrast with the black conveyor belt helps the address reading system to identify the shape of the consignment.

2.1.7 Content protection

Cushioning at least 3 cm thick

- To ensure that your goods are optimally protected, enough space must be left for cushioning material.
- For loose, fragile or sensitive goods, or for multiple goods, we recommend cushioning or internal packaging at least 3 cm thick, which protects the contents, e.g. with air-cushioning and similar. Tip to test whether the inner packaging protects the shipment item: shake the parcel after inserting the cushioning. If the contents still move, you need more cushioning.
- Use sufficient cushioning for Dispoboxes or other reusable containers.

Instructions Swiss-Express and postal parcels for business customers Version November 2019
2.1.8 Static friction coefficient

Packages made from uncoated corrugated cardboard (in brown or nature) are generally fine. For synthetic packaging, the static friction coefficient should be between $\mu = 0.3$ and 0.6. Please have these packages examined by the packaging and address quality competence center (CC). Contact details are given on page 4.

High static friction coefficient: Consignments stay stuck to the slide and may be sorted incorrectly.

Low static friction coefficient: Consignments slide too quickly and can become damaged or damage other consignments.

For consignments that cause additional processing Swiss Post may impose a surcharge (source: general terms and conditions “Postal Services” for business customers).

2.1.9 Multiple parcels

If multiple items are bundled together by the sender into a single consignment, Swiss Post reserves the right to invoice the sender for additional expenses incurred in processing and transport. Bundled consignments are considered as a single consignment for the purposes of liability. Swiss Post is also not liable for losses or damages if parcels are lost or damaged during processing or transportation or as a result of straps that have come loose.

Tips for secure packaging
- Always adapt the packaging to the contents.
- The packaging should be big enough to completely surround the contents.
- Original packaging may be suitable for Swiss Post packaging, but must be covered with packing paper so the (potentially valuable) contents cannot be identified.
- A repackaging of the original packaging is also advisable because in the event of a return (e.g. undeliverable), additional postal labels will be used on the packaging for the return.
- Reflective, colourful or patterned original packaging may delay the automatic coding, which can lead to delays.
- Protect monitors and screens particularly well, with cardboard or other suitable material.
- With containers (plastic buckets, paint tubs etc.), please ensure they are securely sealed. They must not come loose under the influence of pressure during processing.
- Use edge protection for exposed spots.
- Protect consignments with wine bottles or other glassware with particularly good cushioning; leaking liquids can damage other parcels too.
- For big wine merchants, wine growers, winemakers and wine importers, shipping with the “VinoLog” option is possible. There are special requirements for packaging wine.
- Make sure you package even defective units or items well.
- Be on the safe side in your packaging. Have your packaging examined by our packaging and address quality competence center (CC) (you can find the address on page 4).
2.1.10 Dangerous goods

Dangerous goods include items that have one or more dangers (e.g. flammable, corrosive, infectious, poisonous, pressurized, explosive).

Certain dangerous goods may not be dispatched via the parcel channel because they could harm humans and the environment. These include shipments with radioactive content, explosives or dangerous goods in large quantities. Goods which may be transported as LQ (limited quantities) via the parcel channel are listed in the European ADR/RID dangerous goods guidelines (link at www.swisspost.ch/dangerousgoods). All other goods may only be transported via the small consignment goods channel.

Certain dangerous goods may however be sent via the parcel channel according to law, provided the established quantity limits depending on the respective substance and shipment are observed and the packaging requirements are fulfilled. In accordance with the provisions, such consignments must also be marked on the outside as dangerous goods “LQ” (limited quantities) and bear the LQ value-added service barcode.

More detailed information is available at www.swisspost.ch/dangerousgoods

2.1.11 VinoLog

VinoLog is a global logistics solution from Post CH Ltd, which was specially developed for wine merchants, wine growers/producers, wine importers and wine shops. VinoLog involves the separate, careful processing, including transport and fine distribution of consignments in the original packaging with bottles of 0.5 l, 0.75 l, 1.0 l und 1.5 l with weights up to 30 kg.

Information sheet “VinoLog-Requirements for posting and safe shipment” (German version)

More detailed information is available at www.swisspost.ch/vinolog

2.1.12 PostPac Promo

The service is intended for business customers looking for a high-volume, cost-effective option for sending non-urgent consignments posted at the same time for promotional/advertising purposes within Switzerland (e.g. heavy catalogues, company gifts, 3-dimensional promotional mailing).

The volume per shipment must consist of at least 500 consignments and the promotional/advertising parcels posted must all be of the same dimensions and the same weight, have the same sender and the same contents, and be suitable for automatic sorting. To be absolutely sure, a packaging sample must be checked by the Competence Center (CC) for Packaging and Address Quality.

Especially for printed matter mailed as PostPac Promo, it is necessary to ensure that the packaging (film, cover, etc.) is suitable for automatic sorting; this means that the address can be recognized by automatic systems without any problems and that the consignment does not come apart during processing. In particular, this means:

- The film must be transparent and stretched on tightly, but without bending the consignment.
- The opacity of the address label with integrated barcode must be at least 0.90 percent (DIN 53 146, ISO 1831).
- The film must be applied in such a way that it does not rip apart, form folds or allow the seams to open.
- The seams may not be placed above the address or barcodes. This will prevent excessive rippling.
- The address sheet under the shrink-wrap must meet the addressing requirements (more detailed information in the “Barcodes for business customers” instructions).
- PostPac Promo printed matter must be at least 1 cm thick and weigh at least 1 kg.

More detailed information is available at www.swisspost.ch/postpacpromo

2.1.13 Ineligible consignments

In addition to the prohibition on dangerous goods, it is forbidden to mail any goods that could cause disruption to postal operations, injury to persons or damage to other consignments. In particular, this includes consignments with the following features (non-exhaustive list):

- open consignments (five sides only, e.g. gift basket)
- consignments with a strong, unpleasant odour
- magnetic consignments
- sticky or extremely dirty consignments
- consignments that are wet or leaking fluid
- loaded weapons
- unprotected blades

In case of uncertainty, or if the consignment has distinctive features that are not listed, a final decision will be taken by the Packaging and Address Quality Competence Center.
3 Correct addressing

Private and business customers must drop off their parcel consignments with new addresses and remove old barcode labels that are no longer valid for basic and value-added services and postal prepayment impressions (e.g. intelligent franking system IFS). For example, return consignments that have an arrow pointing at the sender address are not permitted; they must have a new address label.

Swiss Post uses state-of-the-art processing equipment for sending consignments. The automation of the procedures requires a degree of standardization of the address layouts. It runs smoothly when the address format corresponds to the specifications and the address details are correct. That way, addresses can be read automatically and delays or returns can be avoided.

If you produce your address labels in the Customer Center via the “Domestic parcel labels” online service, the specifications of Swiss Post concerning font and format will be met automatically.

3.1 Specifications

3.1.1 Properties of address labels

Address labels must have a paper weight of at least 80 g/m², they must not be reflective and must also be stuck on across their entire surface. The information printed on them must have an optimal level of contrast (ideally black print on a white label) and must not smudge.

3.1.2 Formal specifications

- At least three, at most six lines
- Addressing always longitudinal to the consignment
- No spaces between the lines of the address
- The address lines must be flush left
- Neither the postcode nor the location may be underscored or crossed out
- Do not put the country code for domestic consignments
- Empty space of at least 1 cm of text at the edges of the label

3.1.3 Recipient address

A correct postal recipient address contains:

- Penultimate line: the complete, official street name and the correct house number
- Bottom line: the correct postcode and the complete city name (for domestic consignments without country code)
- Consignments with delivery instructions may not be sent to P.O. Box, poste restante, PickPost and My Post 24 addresses.

3.1.4 Correct postcode (PLZ)

The correct postcode can be found in the Swiss Post Customer Center via the “Search for postcode” online service.

3.1.5 Sender’s address

Preferably, provide the sender’s address vertically. The sender’s address must be provided to the left of the recipient’s address (distance between sender and recipient address min. 10 mm). Horizontal sender’s addresses should not be placed beneath the recipient’s address. For business customers with their own franking licence, sender details are not obligatory.

3.1.6 Consignment barcode

Each parcel is provided with a consignment barcode. It contains details about the sender as well as the consignment number and helps to identify the consignment. The consignment barcode number may be used within two months only for one consignment. The consignment barcode offers complete service transparency, allows for consignment tracking, and is the basis for invoicing and any investigations. The consignment barcode plays a crucial role in automatic sorting. Consignment and value-added service barcodes, but also the complete address labels with consignment and value-added service barcodes may be generated via the “Domestic parcel labels”online service.

Don’t want to generate the barcodes yourself? Then simply order them via the “Order barcodes & shipping labels” online service.

Business customers who want to generate addresses with integrated barcodes themselves can find more detailed information in the “Barcodes for business customers” instructions. Please contact your customer advisor if you have any further questions.

3.1.7 Intended service combinations

Please take note of the Swiss Post guidelines concerning the intended combinations in Appendix 1 of the “Barcodes for business customers” instructions. If you have further questions, please contact your customer advisor.

3.1.8 Customer-specific consignment barcode

Customer specific consignment barcodes – whether integrated into the shipping address or placed on the surface of the consignment – must not have the same coding scheme as the labelling barcode of the basic services, value-added services, delivery instructions or PostLogistics solutions. Additionally, the content of a customer-specific labelling barcode must not
display a coding scheme that Swiss Post uses for its internal consignment processing.

If you would like to use barcodes with separate values on the surface of the consignment, then 4- or 18-digit codes must be avoided. In case of doubt, please contact your customer advisor.

3.1.9 Font guidelines

- **No** use of blackletter typefaces, italic fonts, ornate letterings or negative fonts.
- Desirable fonts: Sans serif such as Frutiger, Arial, Helvetica, Univers etc.
- Proportional fonts can only then be processed by machine when the original type fonts are neither undercut nor spaced (pulled apart).
- Use a laser or inkjet printer. Matrix printers (Inkjet) are permitted only if they meet certain requirements (at least 300–600 dpi). Get some advice.
- Write handwritten addresses in capital letters, without the individual letters touching one another (individual adhesive-label addresses for handwritten addresses are available for free from all post offices).

3.1.10 Font specifications

- Sizes min. 3 mm, max. 4 mm (size 12–16 font)
- Line spacing between the descender lengths of the upper lines and the ascenders of the lower lines: at least 1 mm, at most 1.5 mm.

3.1.11 Format

In case you do not choose the optimal white address or coding/franking zone, you may use the following backgrounds on the basis of the Euro colour scale of four colour printing:

<table>
<thead>
<tr>
<th>Colour</th>
<th>Proportion</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cyan</td>
<td>0–20%</td>
</tr>
<tr>
<td>Magenta</td>
<td>0–20%</td>
</tr>
<tr>
<td>Yellow</td>
<td>0–20%</td>
</tr>
<tr>
<td>Black</td>
<td>0–10%</td>
</tr>
</tbody>
</table>

When using different colours, the cumulative colour proportion must not exceed 20%. Franking, addressing and coding zones must not include patterns and colour gradients and must be monochrome.

Details concerning the address label with integrated consignment barcode can be found in the “Barcodes for business customers” instructions.

When using different colours, the cumulative colour proportion must not exceed 20%. Franking, addressing and coding zones must not include patterns and colour gradients and must be monochrome.

Details concerning the address label with integrated consignment barcode can be found in the “Barcodes for business customers” instructions.
3.1.12 Address placement

Address labels below and to the right on the biggest surface. Remove old address labels and consignment barcodes.

With trapezoidal packages in the form of a truncated pyramid, put address labels and consignment barcodes on the side opposite the biggest surface. Consignment barcode to the left of the address, value-added service barcode to the right of the address. Address and consignment barcode must be placed entirely on the same horizontal surface.

Tips for return labels

If you would like to provide your customers with a return address or a business reply address label, please note that this label must be at least as big or bigger than the original address label. That way, the old, no longer valid consignment information will be completely covered, and misunderstandings and misinterpretations in processing at the parcel channel can be avoided. It is also advisable that the recipients of return labels remove all old address labels and barcodes from the package for the return shipment.
3.1.13 Film, address envelopes, and document pockets

Consignments and addresses without envelopes and without film are the easiest to process. Please take note of the accepted static friction coefficient in accordance with 2.1.8. Should envelopes or films be used, slightly matt materials are suitable. Shrivelled, coloured and black materials are not appropriate. The address underneath and the consignment barcode must be legible and designed in accordance with the applicable requirements, in particular the quiet zones as described in section 3.1.11. The print contrast PCS (opacity = relation between bright and dark values) behind the film must be at least 75%. Please ensure that document pouches are smooth and flat and do not contain air.

Document pockets are available in the Postshop (www.postshop.ch) or in most stationery shops.
### 4 Collections

#### 4.1 General

Would you like to gain time by saving yourself a trip to the post office? Upon request, Swiss Post collects all your mail items (letters, parcels, express items and international consignments) from you.

More detailed information is available at www.swisspost.ch/collection.

**Acceptance of additional volumes**

For additional volumes at regular collections or for requesting collections according to need, you can contact us free of charge at 0800 825 800 or via online service “order collection”, www.swisspost.ch/collection.

#### 4.2 Loading sequence

For Rollboxes with mixed contents, please note the following shipping sequence:

1. PostPac Economy
2. PostPac Priority
3. A/B Mail in boxes
4. International consignments
5. Swiss-Express “Moon”
6. A/B Mail, individual

#### 4.3 Addresses for Rollboxes

Rollboxes with mixed contents have a red triage address. Rollboxes with PostPac Priority have a white PostPac Priority address. Rollboxes with PostPac Economy have a blue PostPac Economy address. Addresses are available from the online service “Order forms and brochures” (DocuCenter) or via www.swisspost.ch/docucenter.

![Red label for a mixed Rollbox.](image1)

![White label only for PostPac Priority.](image2)

![Blue label only for PostPac Economy.](image3)
5  Shipment processing

5.1 Automatic coding system (ACS)

Automatically processed standard consignments are placed on the conveyor belt by hand in the parcel center and first pass through the ACS. This produces a digital image of the consignment surface and looks for the consignment barcode, the value-added services and the recipient address. For automatically processed consignments with DataTransfer, only the consignment barcode is read and is linked to the address data that has been transferred. Illegible recipient addresses are forwarded to the video-coding system (VCS) by the ACS.

5.2 Video-coding system (VCS)

The image of an illegible address appears on the screen in the video coding. Coders decipher and record the required address data within a few seconds. If this is not possible, the consignment leaves the facility and goes to manual coding (MCS).

5.3 Manual coding system (MCS)

Here the recipient addresses that have not been recognized by ACS and VCS are recorded manually, along with the consignment barcode. Then, the consignment is moved to the sorting facility. Manually coded consignments are considerably more expensive than automatically coded parcels.

5.4 Manual consignment processing

Certain types of consignment cannot be sorted mechanically and must be processed by hand. This applies to all bulky consignments as well as to consignments with standard dimensions (60 × 60 × 100 cm) which have properties that prevent mechanical processing. The processing, sorting and coding of such consignments is expensive and time-intensive. Detailed information can be found in section 2 “Packaging”.
## 5.5 Overview of the three types of consignment

### 5.5.1 Standard consignments

<table>
<thead>
<tr>
<th>Standard consignments</th>
<th>Minimum dimensions (recommended)</th>
<th>Maximum dimensions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Standard consignments are rectangular. The surface must not be wavy and not sloping (at most 5° for the display surface).</td>
<td>Thickness 1 cm</td>
<td>Weight 100 g</td>
</tr>
<tr>
<td></td>
<td>Format 10,5 × 14,8 cm (A6)</td>
<td></td>
</tr>
<tr>
<td></td>
<td>Weight 30 kg</td>
<td>Format 60 × 60 × 100 cm</td>
</tr>
</tbody>
</table>

**Tip**
Consignments below the minimum dimensions may also be processed. Recommendation: Please take the minimum dimensions into consideration. This allows consignments to be processed at our facilities automatically, carefully and without the use of additional equipment.

### 5.5.2 Consignments with manual processing (MAN)

**Consignments with manual processing**
Despite having standard dimensions, certain consignments are unable to be sorted by machine. They require manual processing if they have the following characteristics:
- special packaging*
- certain packaging materials*
- certain placement of the address and consignment barcode
- parcels with wavy or sloping surface (above 5° for the display surface)

*These types of consignment can impede the sorting process or damage other consignments.

### 5.5.3 Bulky consignments (SP)

**Bulky consignments**
Consignments which exceed the maximum dimensions for standard items, are unpacked or sent with a special tag are deemed to be bulky goods. Consignments over 30 kg or consignments which exceed the bulky goods dimensions must be sent via the small consignments channel (contact: Swiss Post Customer Service).

**Bulky goods include**
Consignments over 100 cm in length or with 2 dimensions greater than 60 cm.
