

Partner for/with DataTransfer interface for letters

Optimizing and automating postal processes

A wide range of partners have already developed or implemented the DataTransfer interfaces in accordance with Post CH Ltd specifications, and offer this software/ interface to customers interested in optimizing and automating their postal processes.

Possible services/processes using a DataTransfer interface:

Service	Process
Dispatch list <ul style="list-style-type: none"> – Declare consignments – Create delivery note 	<p>The dispatch list is used in the same way as a delivery note. It is required when posting addressed, PP-franked letter mail.</p>
Letters with barcode <ul style="list-style-type: none"> – Supply consignment data – Create barcode list – Track consignments – Receive confirmations of receipt – Get archive data 	<p>To post letters with barcode, you require a barcode list. This barcode list functions as a delivery note and is used as proof of mailing. The barcode is used to track consignments. You can view daily reports containing the processing data and confirmations of receipt for your consignments in the last 24 hours. This means you are always up to date with the current processing status and whether the consignment has been delivered. For court documents (GU), you can also obtain all the confirmations of receipt in archive format PDF/A with digital signature.</p>
Letters with Letter ID <ul style="list-style-type: none"> – Track consignments – Obtain returns data 	<p>The data matrix code letter ID enables every individual consignment in a bulk mailing to be identified and tracked at all times across the entire process. Letters with Letter ID are declared using a dispatch list (see the "Dispatch list" service). You can view daily reports containing the processing and returns data for your consignments in the last 24 hours, keeping you up to date with their progress.</p>
Address maintenance <ul style="list-style-type: none"> – Verify addresses – Receive feedback (among other things) – Person hit – Household hit – Company hit – Address corrections – Movers' addresses in Switzerland and abroad – "Deceased", "Company no longer in business" and "New address unknown" status information – Address unknown – Duplicates 	<p>The "Address maintenance" service enables you to check large address databases immediately prior to dispatch or at any point in time in order to ensure they are correct and up to date. Depending on the address status message, feedback is either free (e.g. person hit) or fee-based (e.g. movers' address). For the purposes of better cost transparency, a non-binding quotation can be requested in advance. A customer-specific number (e.g. Letter ID) can also be provided in the data submitted.</p>

The list provides you with an alphabetical overview of which letter shops / printing service providers and software solution providers you can link to Swiss Post interfaces. Please contact the respective companies directly if you are interested in one of the products listed below.

If you are a letter shop/printing service provider or software solution provider with a DataTransfer interface or postal processing software and wish to be included in this factsheet, please contact us:
